NEW · TAPERED HEX MATTING

Easier to clean. Harder to lift. Built to last.

Our new tapered hex mat keeps everything farmers liked about the original, then goes further: thicker rubber, a smarter tread and a stronger, lift-resistant design made for the hardest-working feed pads.

26mm
Solid rubber thickness, up from 22mm

10yr
Warranty that backs the mat for a decade

Tapered
Hex edges shed stones and let scrapers glide

Solid
Reinforced corners and centres resist lifting

1

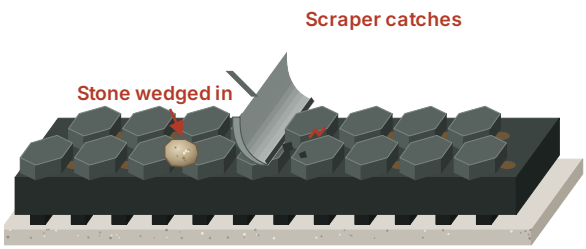

HOW IT WORKS

Why a tapered edge makes all the difference

Look closely at the hex tread and you'll see each block slopes down to the base rather than dropping straight off. That small change in shape solves the three biggest day-to-day frustrations with textured matting on a feed pad.

Straight-sided tread

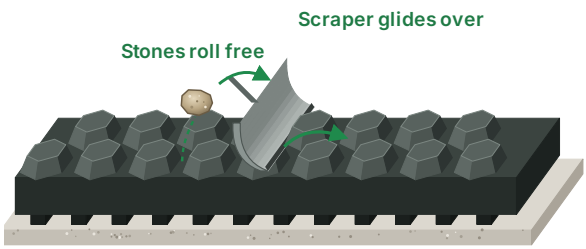

SQUARE EDGE

Square walls trap stones between blocks and give a scraper a hard corner to catch and tear.

Tapered hex tread

TAPERED

Sloped walls push stones up and out, and guide the scraper blade smoothly over the top.

No more trapped stones

Stones had a habit of lodging between the gaps of a hex pattern. With a tapered edge there's nothing for them to wedge against, so they work their way back out.

Faster, easier cleaning

Open, sloped channels between each block mean muck and feed wash and scrape out quickly, so the pad stays cleaner with less effort.

Scraper-friendly surface

The top surface no longer catches on the corner of a scraper blade. That protects the tread from tearing and keeps the grip working for longer.

2

STAYS IN PLACE

Designed to resist lifting

A mat that lifts is a trip hazard, a cleaning headache and the start of damage. Two design changes keep this mat flat and locked down.

- **Bigger interlocking sections**
  Larger joining pieces grip each neighbouring mat over a wider area, so the floor stays locked together even as rubber expands in summer heat.
- **Solid corners and centres**
  Every corner and the centre of each mat is solid rubber. This strengthens the points that take the most punishment, from tractor wheels driving over the top to cows standing on a corner.

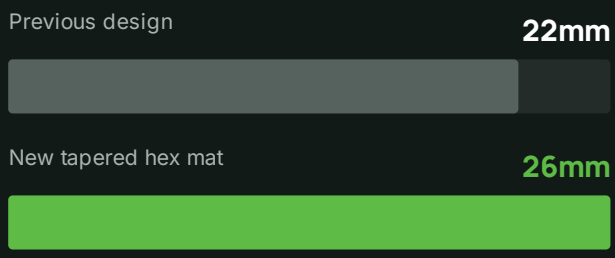

Large interlocking tabs on every edge, with solid corners and centre

BUILT TO LAST

More rubber where it counts

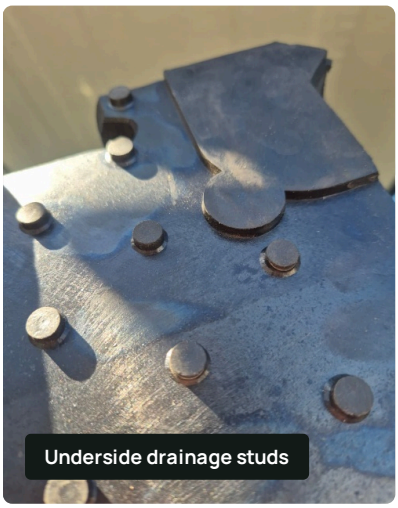

At 26mm, the new mat is 4mm thicker than our previous 22mm design, about 18% more rubber in every square metre. That extra depth adds structure and durability for feed pads, especially where tractors and machinery drive across the surface every day.

3

PROVEN FEATURES, KEPT

Everything that already worked

Underside drainage studs

Countersunk holes

Fixings sit below the surface, so nothing sticks up to catch hooves or scrapers.

Underside drainage studs

Lift the mat off the concrete so water drains away, and add cushioning for cows' feet.

Offset interlocking

A staggered joining system for better interlocking and less wastage on install.

10-year warranty

The same decade-long warranty, so you can buy with complete confidence.

The ultimate rubber mat for feed pads.

Thicker, grippier, easier to clean and harder to lift, backed by a 10-year warranty.
